

Magnetic pump [MD series]

Product characteristic

1. Magnetic drive, adopts the non-shaft-seal design, complete leakage proof;
2. Equipped with anti-idling device;
3. It is suitable for the circulation transportation of various chemical solution;
4. The applicable temperature shall be determined according to different chemical properties: GFRPP - below 80 °C, CFRPP - below 80 °C, PVDF - below 100 °C, CFRETFE - below 150 °C.

Product superiority

1. A variety of connection modes of front cover inlet and outlet are available;
2. Special sealing O-ring brings excellent sealing effect;
3. Impeller deflection is lower than 0.2mm;
4. Passive magnets and plastic shells are injection molded at one time to ensure that there is no penetration forever.
5. The shaft core is made of 99% alumina and SSIC material;
6. The connection between the motor and the pump head is a plastic injection molding integrated structure, which can prevent the corrosion of the connection caused by the leakage of acid and alkali gas and liquid;
7. The surface of drive magnet adopts resin paint baking, with better corrosion resistance. After dynamic balance test, the vibration of drive magnet is lower than 2.0mm/s;
8. The motor adopts international brand, with stable performance and ultra-quiet operation.

Decomposition diagram of integrated machine

- ① Front cover
- ② Seal O-ring of front and rear cover
- ③ Impeller assembly
- ④ Rear cover
- ⑤ Rear cover back plate
- ⑥ Drive magnet
- ⑦ Motor

Decomposition diagram of split machine

- ① Front cover
- ② Seal O-ring of front and rear cover
- ③ Impeller assembly
- ④ Rear cover
- ⑤ Connecting bracket
- ⑥ Drive magnet
- ⑦ Motor

Model description

- ① Model No.: MD
- ② Pump material: F-GFRPP C-CFRPP P-PVDF E-CFRETFE
- ③ Inlet and outlet diameter: 20-3/4" 25-1"
- ④ Horsepower: 0-6W; 1-10W; 2-20W; 3-45W; 4-65W; 5-90W; 7-180W; 8-260W
- ⑤ Connection: S- screw; H- hose
- ⑥ Pump shaft material: A- ceramic; S- SSIC
- ⑦ O-Ring: E-EPDM; V-VITON(FKM)
- ⑧ Frequency: 5-50HZ; 6-60HZ
- ⑨ Voltage: V11-10/110V; V22-10/220V; V38-30/220V/380V; V41-30/280V/415V

Product specification

Installation diagram

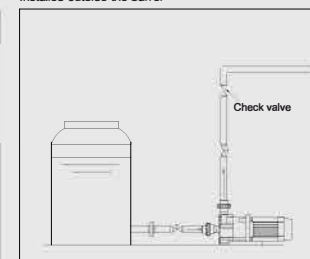

Used in heat exchanger

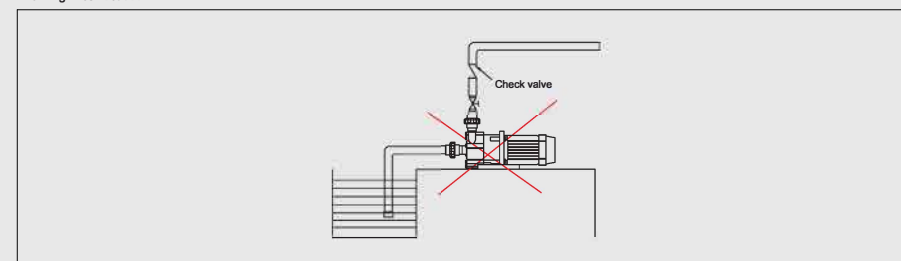

Used in reaction tank or filter compressor

Installed outside the barrel

Warning: incorrect use

Precautions for safe operation

1. Safety warning

- Running without cutting off the power will cause electric shock!
- Do not start the pump without connecting the ground wire and leakage protector!
- Electrician operation should be carried out by professional personnel!
- When operating the pump, please wear protective equipment to prevent serious injury caused by chemical solution!
- Operations related to toxic liquids may cause poisoning!
- Use the pump in strict accordance with the instructions and scope of use!
- During operation, the surface temperature of motor and pump is very high, do not touch directly!
- It is forbidden to transform the pump without permission, otherwise serious accidents will be caused. If the pump is modified without permission or in accordance with the operating instructions, the company will not bear any loss caused by the user!
- There is a strong magnet in the magnetic drive pump. Its strong magnetic field will cause obvious damage to the person wearing the electronic device (i.e. electronic pacemaker, etc.)!

2. Important note!

- No idling of the pump. The idling of the pump can make the parts inside the pump heat up by friction, which will damage the pump. Pump operation with suction valve fully closed is also considered as idling.
- In the process of operation, when dangerous signals and abnormal conditions are found, the operation shall be terminated immediately, and it shall be started after the exception is eliminated.
- The operation and use of the pump must be carried out by qualified operators.
- The pump is only allowed to be used under the specified voltage, otherwise the pump will be damaged or fire will be caused.
- The use place of the pump shall be equipped with protective measures to prevent liquid splashing or leakage.
- Operations related to toxic liquids may cause poisoning, so it is necessary to ensure adequate ventilation at the operation site.
- Do not scrape, damage, squeeze or stretch the cable with force. The use of damaged cables is likely to cause fire or electric shock.
- The covered pump is easy to cause fire or mechanical failure due to internal heat accumulation during operation.
- When a pump is under maintenance, pay attention to avoid other operators turning on the power supply switch due to mistakes. It is better to place a warning sign beside the power supply switch to inform that the pump is under maintenance.
- The liquid from the pump may be highly toxic and harmful chemicals, which must be drained to a special container for storage
